### DESCRIPTION:

CZ129 is a 60/40 low Leaded Brass that is similar to Muntz metal but with a fine dispersion of Lead particles. It offers excellent hot working properties and very good cold formability and machinability.

Known as a bending Brass the CZ129 grade also offers a good strength, ductility and general corrosion resistance. This combination of properties is ideal for components that require hot forging or upset forging followed by some machining.

### TYPICAL APPLICATIONS:

This is a standard bending Brass which can be readily hot and cold formed or riveted for a variety of applications including architectural, decorative and industrial applications.
